

## SOL PLUS M

**Product code: 265304501** 

#### Biostable metalworking fluid

This product is a high-performance water-soluble coolant containing high levels of lubricity additives combined with other multi-functional components that provides biostatic characteristics. It is a product without nitro sating agents, secondary amines, heavy metals and chlorine compounds. It forms milky emulsions, with low foam and high cooling and anticorrosive properties.

It is suitable for all kind of operations with steel, cast iron, aluminum, brass and copper. The product is suitable for a wide variety of machining operations: turning, milling, tapping, boring and threading. It can also be used in grinding operations when a good finishing is required. For all type of CNC, transfer and metalworking machines.

### **Benefits & Advantages**

- Operator acceptability
- Ideal rationalization product
- Excellent service life
- Environmentally acceptable
- Does not contain nitrite or chlorine
- Does not form sticky deposits on machine surface
- Economical in use
- Multi-metal suitable

## **Typical Performance Data - Neat Product**

| Typical                         | Value        |
|---------------------------------|--------------|
| Appearance                      | Amber liquid |
| Specific Gravity @ 20 °C, gr/ml | 0.97         |
| Sodium nitrite                  | Free         |
| Chlorine content                | Nil          |

## Typical Performance Data - 5% emulsion (in tap water 150ppm)

| Typical        | Value             |
|----------------|-------------------|
| Appearance     | Milky translucent |
| pH             | 9.1               |
| Corrosion test | No corrosion      |
| Foam           | Very low          |

All performance data on this Technical Data Sheet are indicative only and can vary during production.

#### Mixing

The product is easy to mix. Simply pour the concentrate into water at the appropriate solution and mix. It is recommended between 5-7% depending on severity of application. For severe machining 7-10%. For grinding from 3 to 5 %.

Recommended for water from 100 to 600 ppm and chloride below 0,1 gr/l.

Dilutions can be easily checked by refractometer: % concentration = refractometer reading x 1
